

Emanuele 'Lele' Calo

Head of Infrastructure | DevOps/SRE/Infra | Blockchain Infrastructure Expert

emanuele.lele.calo@gmail.com [LinkedIn](#) [GitHub](#) [lele.rip](#) Lucca, Italy (Remote)

PROFESSIONAL SUMMARY

- 20+ years building/scaling infrastructure | 10+ years DevOps/SRE/TechLead
- Certified Kubernetes Administrator | Blockchain infrastructure specialist
- Crypto enthusiast, founder and builder | Multiple startups founding member
- Tech evangelist passionate about mentoring and knowledge sharing

KEY ACHIEVEMENTS & NERD CREDs

- Built infrastructure handling millions of blockchain transactions daily
- Mentored 50+ engineers in DevOps best practices
- Conference speaker on infrastructure and crypto/blockchain topics
- Merged upstream contributions to PebbleOS, Kata Containers, lazygit, Vial, Teleport and more

EXPERIENCE

Head of Infrastructure, **Linera**

Jul 2025 - Jul 2026

<https://linera.io> | New L1 Blockchain Protocol

- Own end-to-end infrastructure architecture: validator/node topology for a distributed consensus network
- Built the Kubernetes + ArgoCD GitOps platform (AWS, OpenTofu) enabling reproducible deployments across dev, testnet, and mainnet environments
- Acting Staff Engineer: mentor Rust engineers on production infra patterns, align infrastructure, protocol, and SDK roadmaps

Head of Infrastructure, **Switchboard**

Mar 2024 - Jul 2025

<https://switchboard.xyz> | Decentralized Oracle Network (Solana)

- Architected high-availability oracle infrastructure on confidential computing (AMD SEV-SNP, Intel SGX), securing oracle data integrity
- Unified DevOps practices across engineering teams; ran the AWS, Kubernetes, and Terraform distributed infrastructure
- Shipped Rust and TypeScript automation for oracle operations

Lead SRE, **Tint**

Mar 2023 - Jan 2024

<https://tint.ai> | AI Platform

- Owned cloud infrastructure decisions and architecture; built scalable Kubernetes infrastructure for AI workloads
- Established the SRE function from scratch: SLI/SLOs, on-call, disaster recovery and high-availability design, mentorship program

Senior DevOps & SRE, **Kraken**

Mar 2022 - Nov 2022

<https://kraken.com> | Top-5 Global Crypto Exchange

- CORE reliability team member for an exchange handling billions in daily trading volume
- Developed critical services for trading and staking systems; drove security best practices across multiple teams

Senior DevOps, **Ada**

Jan 2021 - Mar 2022

<https://ada.cx> | AI Customer Service Platform

- Maintained 99.9% uptime in 24/7 on-call rotation; architected MongoDB clusters and AWS infrastructure
- Led infrastructure planning as Staff Engineer; mentored the team on Kubernetes and Terraform

<https://goteleport.com> | Zero-Trust Access Platform (Open Source)

- Built secure access infrastructure adopted by Fortune 500 companies
- Implemented zero-trust network architectures and Kubernetes-native security; contributed upstream to the open-source project

Hosting Team Leader, End Point Inc.

Aug 2012 - Jun 2017

<https://endpoint.com> | E-commerce Solutions

- Led a team of 10 engineers managing enterprise hosting infrastructure
- Automated Linux systems at scale; monitoring and alerting for 100+ client systems

Founder, sshadm.in

Apr 2012 - present

<https://sshadm.in> | Consulting & hosting side project - and the sandbox where new tech gets tested first (NixOS, Hetzner, Cloudflare, borgbackup)

Earlier positions (2004-2012): see [LinkedIn](#) for the full history

OPEN SOURCE

Most of my work is infra and lives in private repos - these are the public bits and contributions. More at github.com/eldios

Personal Open Projects

tokentide - <https://github.com/eldios/tokentide>

Standalone Claude Code usage monitor for M5Stack devices: ESPHome package with per-board layouts, OTA updates, polls Anthropic directly with no host software

dotfiles - <https://github.com/eldios/dotfiles>

Fully reproducible NixOS/nixPkgs system & home configuration - actively maintained daily driver

TimelyNG - <https://github.com/eldios/TimelyNG>

Modernized the classic Timely watchface for the new Core Devices Pebble SDK: complications, adaptive layout, WYSIWYG settings, coloured weather icons, Nix dev shell

nomad-on-docker - <https://github.com/eldios/nomad-on-docker>

Local HashiCorp Nomad cluster in Docker - covered in the first video on my YouTube channel [LeleOnTech](#)

Upstream Contributions

PebbleOS (Core Devices) - <https://github.com/coredevices/PebbleOS>

OS-level PIN lockscreen with a new Security settings section for the revived Pebble smartwatch OS (PR on hold)

Home Assistant ecosystem (ha-petkit) - <https://github.com/aavdberg/ha-petkit>

Fixed the BLE config-flow so already-bound Petkit devices re-pair instead of dead-ending

docker-external-dns - <https://github.com/timk153/docker-external-dns>

Wildcard support for A, CNAME and MX records in label-driven Cloudflare DNS for Docker Compose - merged upstream

lazygit - <https://github.com/jesseduffield/lazygit>

Two merged bugfixes in the most popular git TUI, including stderr redirection handling (Go)

Vial (QMK-based keyboard firmware) - <https://github.com/vial-kb/vial-qmk>

Added Vial support for the Gizmo GK6 (OLKB) keyboard - C firmware merged upstream, now shipped in every Vial build

Kata Containers - <https://github.com/kata-containers/kata-containers>

Upstream PR born from production TEE work - Confidential Computing (Intel SGX / AMD SEV-SNP) container runtimes on Kubernetes (on hold)

Teleport - <https://github.com/gravitational/teleport>

Several merged PRs (packaging fixes, cert-auth backport) - contributed while working there

qbz - <https://github.com/vicrodh/qbz>

Nix build fix (libjack2) for the hi-fi Qobuz desktop player for Linux and macOS

TECHNICAL SKILLS

Certifications: CKA - Certified Kubernetes Administrator (https://lele.rip/cka_2018.png)

Orchestration

Kubernetes (k3s/k8s/EKS/GKE) Docker Helm Kustomize

GitOps & IaC

ArgoCD OpenTofu/Terraform Ansible Crossplane Packer

Cloud

AWS (EKS, EC2, S3, Lambda, RDS) GCP (GKE, Cloud Run) bare metal (Hetzner, OVH, Latitude)

Languages

Bash/Shell Go Rust Python TypeScript Ruby Perl Solidity

Blockchain

Solana (validator ops, on-chain programs) Ethereum (node ops, smart contracts) Bitcoin/Lightning oracle networks
MEV

Confidential Computing

AMD SEV-SNP Intel SGX Kata Containers on Kubernetes

Observability

Prometheus/Grafana OpenTelemetry Datadog ELK/OpenSearch SLI/SLO design

Databases

PostgreSQL MySQL MongoDB (sharding) Redis (cluster/sentinel) TimescaleDB

Network & Security

WireGuard zero-trust/mTLS HAProxy nginx Traefik Cloudflare CoreDNS Vault/OpenBao SELinux

OS

NixOS (primary, everywhere it makes sense) Arch (ex-AUR maintainer of ~20 pkgs) Debian/Ubuntu RHEL/CentOS

BEYOND THE TERMINAL

Timezone: UTC+1 (CET/CEST) | works US hours (ET → PST)

Hardware & DIY: custom mechanical keyboards (QMK/ZMK), 3D printing, ESP32/Arduino, Home Assistant - homelabbing & self-hosting since early 2000s

Early adopter: Docker v0.9, Kubernetes v1.2, NodeJS v0.3.x, Android v1.6, Minecraft alpha (\$9.99 gang)

Gaming & geekery: roguelikes (Dwarf Fortress, Noita, NetHack), tabletop RPGs (D&D, Pathfinder, Cyberpunk), retro computing

Volunteering: Scout leader & national IT team (CNGEI) - adult trainer, association infra

Sports: Acrobatic gymnastics, climbing, bouldering

Family: married, 2 sons, 3+ cats :3

Languages: Italian (native), English (fluent)
